## Cost Calculations

Here's an example for figuring costs...

Sally spent \$60

Jane spent \$50

Beth spent \$40

Lucy spent \$30

All together they spent \$180.

\$180/4 people in the group averages out to \$45. That means that each person should balance up or down to \$45 depending on whether they overspent or underspent.

Here's how to settle up:

Sally spent \$60.  $60 - 45 = 15$ . She is owed \$15.

Jane spent \$50.  $50 - 45 = 5$ . She is owed \$5.

Beth spent \$40.  $40 - 45 = -5$ . She OWES Jane \$5.

Lucy spent \$30.  $30 - 45 = -15$ . She OWES Sally \$15.
